18. Rüdesheim Berg Roseneck
19. Lorchhausen Seligmacher
20. Hattenheim Wisselbrunnen

VINEYARD SITE	CHARACTERISTICS	GRAPE VARIETY
Assmannshausen Höllenberg	With a gradient of 45%, the Höllenberg is one of the steepest slopes of the Rheingau. Typical for the **internationally known Pinot Noir** site is the **heat-storing and sparse slate soil.**	Pinot Noir
Rüdesheim Berg Schlossberg	**The steepest location in the Rheingau** (65% slope incline), west of Rüdesheim at the height of the Mäuseturm in the so-called *Binger Loch*, where the Rhine bends and flows north again. Extremely **high sun intensity and permeable soils** of Taunus quartzite and phylitic slate.	Pinot Noir, Riesling
Rüdesheim Berg Roseneck	The pure Riesling vineyards lie below the Niederwald monument, **protected from the wind by the Taunus ridge** with up to 50% slope inclination. **The western part is rather stony** and is one of the steepest parts of Germany. **The eastern part, on the other hand, is rather flat and consists of loess loam soils.**	Riesling
Lorchhausen Seligmacher	A grandiose location at an altitude of 525ft with a gradient of 60%, which **has not yet long been the status VDP. GROSSE LAGE©** and which we manage as the only VDP winery. **Slate soils.**	Riesling
Hattenheim Wisselbrunnen	**A relatively flat vineyard site** between Eltville and Hattenheim, only a few hundred metres from the Rhine, with a 10% gradient. **Warm, well-drying soils of loess loam and marl.**	Riesling
