

SlimRack™

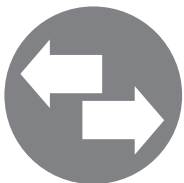

Maximize Interior Space

Versatile Operation

Drive components “float” to adjust for bumps and unbalanced weight during operation. System tested to meet strict environmental performance, weight and cycle endurance and dynamic speed standards.

More Space

Mechanism fits inside the wall cavity leaving significantly more interior space. Other bulky systems require slide room fascia to cover motor and pulleys.

Four-Corner Seal

The secure four-corner seal prevented water and dust infiltration during more than 4,500 extend and retract test cycles.

Programmable Positions

Patented position-sensing technology allows a manufacturer to set ideal custom stop positions to meet different slide-out room specifications. Powerful motor brake keeps room locked in position, preventing room creep or drift.

No Adjustments

Never needs complicated adjustments like cable systems do.

Flush-Floor Option

Combines versatile above-floor placement with attractive, seamless flush-floor style for a sleek, polished, high-end look with no step up.
