

The diagram illustrates the projection of a point in a 3D coordinate system onto the xy -plane and the yz -plane. The xy -plane projection is shown as a 2D coordinate system with x and y axes, and the yz -plane projection is shown as a 2D coordinate system with y and z axes. The point's coordinates are indicated as (x, y, z) .

QUESTION

The diagram illustrates the projection of a point in a 3D coordinate system onto the xy -plane and the yz -plane. The xy -plane projection is shown as a 2D coordinate system with x and y axes, and the yz -plane projection is shown as a 2D coordinate system with y and z axes. The point's coordinates are indicated as (x, y, z) .
