

The cell membrane is a thin, flexible barrier that surrounds the cell and controls the movement of substances in and out. The cytosol is the fluid-filled space inside the cell where organelles are suspended. The nucleus is the control center of the cell, containing genetic material. The vacuole is a large, clear space that stores water and other substances. The chloroplast is an organelle that captures light energy and converts it into chemical energy through photosynthesis.

FALCETILE

The cell membrane is a thin, flexible barrier that surrounds the cell and controls the movement of substances in and out. The cytosol is the fluid-filled space inside the cell where organelles are suspended. The nucleus is the control center of the cell, containing genetic material. The vacuole is a large, clear space that stores water and other substances. The chloroplast is an organelle that captures light energy and converts it into chemical energy through photosynthesis.
