Bio-based Solvents Surfactants - Emollients A Smart Choice

Many heavy duty hand soap formulators use petroleum-based solvents, like mineral spirits, to help cut the grease and grime on dirty hands. While effective, there are natural-based alternatives.

Hand Defense products are formulated with natural, bio-based solvents, surfactants, and emollients.†

Hillyard formulations with lower concentrations of natural solvents are very efficient at breaking down grease and grime when compared to products with higher concentrations of mineral spirit-based solvents.

Natural solvents, surfactants and emollients - a smart choice for your hands and our environment!

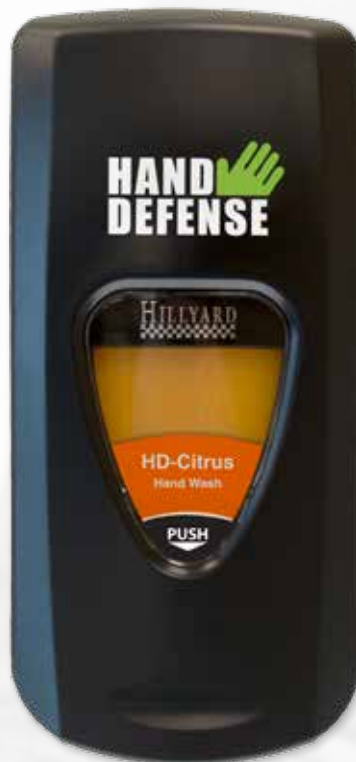

† LDN-Natural is solvent-free and contains natural bio-based emollients and surfactants. MDP-Citrus, HD-Citrus, HDP-Citrus contain natural bio-based solvents, emollients and surfactants. HDP-Cherry contains bio-based emollients and VOC exempt mineral-spirit solvent.

* Existing coating must be structurally sound without peeling and have good adhesion to the sub-surface.

** As with all concrete coatings, because concrete composition and condition varies greatly, it is best practice to perform small test patches prior to priming and coating an entire floor. Test kits are available. Follow all label instructions.
