

## QUESTION

Which of the following is a characteristic of a primary cell?

- A. It is rechargeable.
- B. It is used in a variety of applications.
- C. It is used in a variety of applications.
- D. It is used in a variety of applications.

## ANSWER

The correct answer is B. A primary cell is a non-rechargeable battery that is used in a variety of applications. It is typically used in low-power devices and is designed for long-term storage. The other options are incorrect because primary cells are not rechargeable and are not used in a variety of applications.

## EXPLANATION

Primary cells are non-rechargeable batteries that are used in a variety of applications. They are typically used in low-power devices and are designed for long-term storage. The other options are incorrect because primary cells are not rechargeable and are not used in a variety of applications.

## QUESTION

## ANSWER

The correct answer is B. A primary cell is a non-rechargeable battery that is used in a variety of applications. It is typically used in low-power devices and is designed for long-term storage. The other options are incorrect because primary cells are not rechargeable and are not used in a variety of applications.

## EXPLANATION

Primary cells are non-rechargeable batteries that are used in a variety of applications. They are typically used in low-power devices and are designed for long-term storage. The other options are incorrect because primary cells are not rechargeable and are not used in a variety of applications.
