

### Assembly Troubleshooting

Please note the screw hole bevel on the frame pieces [A and B]. The screw [E] should be inserted from the same side as this bevel, allowing the screw to sit flush with the frame when properly installed.

If the screw [E] is not sitting flat with the frame when installing the middle shelf [D], the screw has been inserted from the wrong side. Please see the detailed diagram below [with Part E] for guidance. The horizontal bar on the frame is on the side closest to the middle shelf.
