## Specifications

Jones Stephens Red Rubber Ring Gaskets are 1/16" thick. The kits contain ASTM A307 hex bolts and heavy hex nuts.

## Do Not Use These Gaskets In High Chlorate or Chlorine Environments

Chlorate refers only to chlorine in the +5 oxidation state, or chlorate ion. The chlorate ion is a byproduct of the disinfection process used to treat drinking water. It is formed when sodium hypochlorite or chlorine dioxide are used in the treatment process. SBR is not recommended for environments with elevated levels of chlorates or chlorines. Chlorine chemically attacks SBR very aggressively. This can create a potential leak path.
