

50 PSI COMPRESSOR ACCESSORIES

Corrugated Tubing

Dynarex Resp-O₂™ Corrugated Tubing is designed to help administer nebulized medication during aerosol therapy and intermittent positive pressure breathing (IPPB) therapy. This high-quality respiratory tubing is designed from premium vinyl materials for optimal durability. The flexible, lightweight tubing features tapered cuffs on both ends for secure attachment to standard 22mm connections. The disposable Tubing is conveniently segmented every six inches to allow for accurate cutting and sizing. The Tubing features a blue tint design to allow for easy monitoring of condensation build-up. The Tubing is available in 6-foot and 100-foot lengths to suit a variety of needs.

- Designed to help administer aerosol and IPPB applications
- Crafted from high-quality vinyl materials for optimal durability
- Flexible and lightweight for convenient handling
- Tapered cuffs attach to standard 22mm adapters for a secure fit
- Segmented every 6 inches for accurate cutting and sizing
- Blue tint allows for easy visualization of condensation build-up
- Disposable, single-patient use for optimal hygiene
- Available in 6-foot and 100-foot lengths to suit a variety of needs

Large Volume Nebulizer

The Dynarex Resp-O₂™ Large Volume Nebulizer is engineered for safe and effective administration of humidified gas in concentrations ranging from 28 percent to 98 percent. The Nebulizer bottle is constructed from high-quality, break-resistant plastic for optimal durability. The empty Nebulizer Bottle is designed for use with clinician-provided water, offering an economical alternative to pre-filled humidifier bottles. The Nebulizer Bottle is equipped with a Venturi-style entrainment ring with an incremental dial for setting oxygen concentrations. The transparent bottle features clear marking for easy monitoring of water levels.

- Designed to efficiently deliver humidified gas for respiratory therapy
- Constructed from break-resistant plastic for optimal reliability
- Venturi-style entrainment ring with incremental dial for adjusting oxygen concentrations
- FIO₂ settings are adjustable from 28% to 98%
- Transparent plastic design provides optimal visibility of contents
- Clearly marked water levels for quick and easy monitoring
- Not made with natural rubber latex or DEHP
