

The diagram illustrates the life cycle of a plant, showing the stages from seed to maturity and back to seed. The labels A through Z represent different parts of the plant and the environmental factors that influence its growth and development. The process is shown as a continuous cycle, with the plant eventually dying and its nutrients being recycled back into the soil.

# FACTFILE

This diagram illustrates the growth of a plant in a pot. The plant is shown with roots in the soil and leaves above ground. The diagram is divided into two sections: 'FACTFILE' and 'FACTFILE'.
