## 60445 STEELMAN STEERING WHEEL HOLDER AND PEDAL DEPRESSOR KIT

The STEELMAN 60445 Steering Wheel Holder and Pedal Depressor Kit provides two services: (1) it holds the steering wheel in position for alignment adjustments, and (2) it depresses the brake pedal for various brake checks, including brake lamp operation. The metal rod easily slides into the actuator for fast, easy installation of the tool on the brake pedal or steering wheel. Simply hand-squeeze the actuator to make fine adjustments.

### KIT INCLUDES:

1. Actuator assembly
  2. Extension rod for Actuator (use when depressing brake/gas pedal)
  3. Hook assembly (hooks on steering wheel when depressing brake pedal or holding steering wheel)
  4. Flat pad (rests on front seal when holding steering wheel)
- Dimensions: 5.1" x 13.5" x 19.5"
  - Weight: 6.4 lb

### OPERATION:

#### STEERING WHEEL:

1. Firmly holds steering wheel in position when setting toe angle.
2. Has a trigger-controlled mechanism and a thumb lock release.

#### PEDAL DEPRESSOR (BRAKE/GAS):

1. This brake and gas pedal depressor is designed to use the steering wheel to obtain leverage.
2. Place the pointed end of the depressor on the pedal, and use the small release lever above the spring to free the trigger mechanism in order to place the jack in place against the steering wheel.
3. Then, press the trigger mechanism to put pressure on the brake or gas pedal. The pedal jack will maintain pressure until the release lever is pressed.
