

QUESTION

1. The following diagram shows a circuit with a battery, a switch, and three lamps. The switch is initially open. When the switch is closed, the lamps glow. The battery is connected to the left side of the circuit. The right side of the circuit is connected to the switch. The switch is connected to the right side of the circuit. The circuit is connected to the battery.

2. The following diagram shows a circuit with a battery, a switch, and three lamps. The switch is initially open. When the switch is closed, the lamps glow. The battery is connected to the left side of the circuit. The right side of the circuit is connected to the switch. The switch is connected to the right side of the circuit. The circuit is connected to the battery.

3. The following diagram shows a circuit with a battery, a switch, and three lamps. The switch is initially open. When the switch is closed, the lamps glow. The battery is connected to the left side of the circuit. The right side of the circuit is connected to the switch. The switch is connected to the right side of the circuit. The circuit is connected to the battery.
