

## 1. Introduction

The following table shows the results of the experiment.

The first column shows the number of trials, the second column shows the number of correct responses, and the third column shows the percentage of correct responses.

The data shows that the number of correct responses increases with the number of trials, and that the percentage of correct responses remains relatively constant.

The following table shows the results of the experiment.

The first column shows the number of trials, the second column shows the number of correct responses, and the third column shows the percentage of correct responses.

The data shows that the number of correct responses increases with the number of trials, and that the percentage of correct responses remains relatively constant.

The data shows that the number of correct responses increases with the number of trials, and that the percentage of correct responses remains relatively constant.

The data shows that the number of correct responses increases with the number of trials, and that the percentage of correct responses remains relatively constant.

The data shows that the number of correct responses increases with the number of trials, and that the percentage of correct responses remains relatively constant.
