

Fig. 1. Dependence of the rate of polymerization on the concentration of the initiator.

As can be seen from Figure 1, the rate of polymerization increases with increasing concentration of the initiator. The dependence of the rate of polymerization on the concentration of the initiator is shown in Figure 1. The rate of polymerization increases with increasing concentration of the initiator. The dependence of the rate of polymerization on the concentration of the initiator is shown in Figure 1. The rate of polymerization increases with increasing concentration of the initiator.

The rate of polymerization increases with increasing concentration of the initiator. The dependence of the rate of polymerization on the concentration of the initiator is shown in Figure 1. The rate of polymerization increases with increasing concentration of the initiator.
