

Figure 1. Schematic of the experimental design. The behavioral and electrophysiological performance of the control and training groups were measured during the pretest, training, and test phases. The behavioral performance was measured as the percentage of correct responses. The electrophysiological performance was measured as the percentage of correct responses. The behavioral performance was measured during the pretest, training, and test phases. The electrophysiological performance was measured during the pretest, training, and test phases. The behavioral performance was measured as the percentage of correct responses. The electrophysiological performance was measured as the percentage of correct responses.
