## Stack. Seal. Done. No wire mesh required.

**3M™ Fire Barrier Blocks, Plugs and Planks help you in key areas of fire protection.**

### **Safety—meets intent of building code**

If fire breaks out, the barriers you've installed in openings for wall and floor through penetrations must, without fail, protect against smoke, fire and toxic gases—and stand up to the powerful hose stream test in ASTM E814. Meet the building code with 3M™ Fire Barrier Blocks, Plugs and Planks—secured and tightly sealed with 3M™ Fire Barrier Rated Foam FIP 1-Step.\*

### **Easy to install—no special tools required**

You can restore the integrity of the wall with a simple “stack, seal and done” application. You won't waste time installing wire mesh reinforcement because the blocks and planks lock in place. Generous sizes that include a large 39-inch plank help you fill openings quickly. Plus, you can trim the material on the spot—so getting a tight, custom fit won't slow you down.

### **Plug-and-done installation for small openings**

For small circular openings which cables can pass through, choose 3M™ Fire Barrier Plugs. They may be cut to wrap around cable penetrants—or holes can be punched through the plugs to route cable through.

**Protect with the best. Call your  
3M Fire Protection rep for an  
onsite demo!**

\*Refer to the UL directory for the specific UL tested and listed system for your application.

See how the barrier stands tough against hose stream and survives fire. Watch the fire test video at [www.3M.com/Firestop](http://www.3M.com/Firestop)
