

### PROCESSES

The following processes are used in the production of the product:

- 1. **Raw Material Selection:** Careful selection of raw materials to ensure quality and consistency.
- 2. **Preparation:** Initial processing and preparation of raw materials.
- 3. **Manufacturing:** The core production process involving various stages and machinery.
- 4. **Quality Control:** Regular testing and inspection to maintain high standards.
- 5. **Packaging:** Final packaging of the product for distribution.
- 6. **Storage:** Proper storage conditions to preserve the product's integrity.

Process	Material	Equipment	Time
Raw Material Selection	Various raw materials	Selection criteria	10 minutes
Preparation	Prepared raw materials	Preparation tools	15 minutes
Manufacturing	Manufactured components	Manufacturing machinery	30 minutes
Quality Control	Quality control samples	Quality control tools	5 minutes
Packaging	Packaged product	Packaging materials	10 minutes
Storage	Stored product	Storage facilities	Ongoing
