

Figure 1. Map of the study area in the south-west of England, showing the location of the study area in relation to the coast and the major towns of Plymouth and Exeter. The map shows the coastline and the location of the study area in the south-west of England, near the coast of Devon and Cornwall. The map also shows the location of the major towns of Plymouth and Exeter.

ANGELIC ACID

Angelica officinalis L.

ANGELIC ACID is a natural product derived from the root of the Angelic plant. It is a white, crystalline powder with a melting point of 150°C. It is soluble in water and alcohol. Angelic acid is used in the pharmaceutical industry for the treatment of various conditions, including hypertension and asthma.
