

1. The blade is made of high speed steel (HSS) or carbon steel. It is hardened to make it sharp and durable.

2. The handle is made of wood or plastic. It is designed to provide a comfortable grip and control.

3. The throat is curved to allow the blade to cut at an angle.

4. The foot is the lower part of the blade. It is used to support the blade while cutting.

5. The eye is the hole in the handle. It is used to insert the wedge.
