Designed in USA • Made in China • Conforms to ASTM D-4236 • Non-toxic Safe for children

WARNING:
CHOKING HAZARD - Small parts.
Not for Children under 3 years.

#1941
Ages 6 to 96

3D Wonder Paint - Goes on Light, Dries Bright!

Use this amazing paint to make beautiful window art and 3D crafts. Trace your favorite pattern with the black or silver outline paint and then fill it in with an array of brilliant glitter colors. Make your designs pop with 3D wiggly eyes and rhinestones.

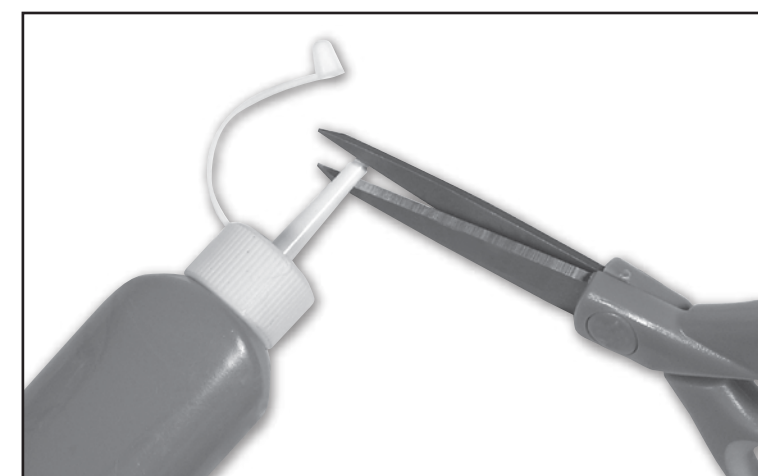

3D Wonder paint can be used to decorate mirrors or any smooth glass surface.

Important Information About This Paint

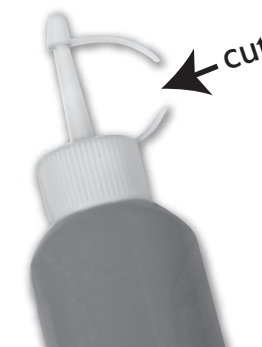

- The paint included is a specially formulated non-toxic acrylic paint that dries permanently on most surfaces, so be careful.
- Paint may stain fabrics, furniture and other surfaces. Wear a smock or old clothes and cover your work area with newspaper.
- Clean up any spills immediately while the paint is still wet. Dried paint may be peeled off some but not all surfaces.
- To prevent the paint from drying out, cap paint when not in use. If the nozzle becomes clogged use the tip of a paper clip to clean it out.
- Window cleaner can be used to remove any paint residue from windows and mirrors. Check with an adult before using any cleaning product.
- 3D Wonder Paint projects may stick together. To preserve your designs, keep your projects separate from each other.
- 3D Wonder Paint projects may fade or change over time. This is a normal part of the crafting process. Save any leftover paint for touch up and repairs, or to make new 3D Wonder Paint art.
- You will need to select a work area where your project can dry undisturbed for several hours or overnight.

Paint Tube Tips

With your scissors, carefully cut the tip of each applicator nozzle as shown. Cut along the line as close to the tip as possible. *If you cut too far down, the paint will come out too thick and it will be difficult to control.*

Helpful Hint – Is the cap getting in your way as you paint? Snip the plastic cap connector and then remove the cap while you are painting. Replace the cap when not in use.

Outline Your Design

Remember, when you are finished, you will peel your picture off of the plastic sheet as one piece. When outlining and painting your design be sure all lines are connected and all spaces are filled in.

You can use the patterns we have included in the kit – or draw your own designs.

1. Choose your design and slide the sheet into the plastic project sheet as shown.
2. Use the black or silver outline paint to trace your designs. Be sure to create a continuous unbroken line.
3. Set your design aside to dry. This will take approximately 30 minutes.
4. Before you move onto the next steps, lightly touch the outline to be sure it is dry.

Paint and Decorate

Now it's time to fill in your design. For best results, apply a thin even layer of paint. If the paint is too thick it will take a long time to dry and it will be difficult to remove from the plastic sheet.

1. Fill in your design with the 3D Wonder Paint of your choice. Hold the applicator slightly above the plastic project sheet and gently squeeze to release the paint.
2. Use the applicator tip to spread the paint around. Be sure the paint covers all open areas.
3. When you are finished painting set it aside to dry. Depending on the thickness of the paint, heat and humidity, drying times may vary. For best results, allow your designs to dry overnight.

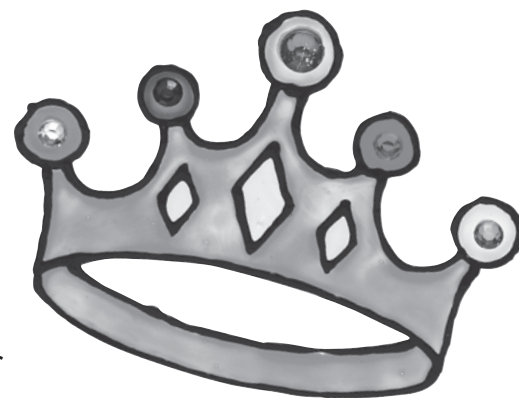

3D Accents

Once your designs are completely dry, you can add rhinestones and wiggly eyes. Use a dot of the white craft glue to stick them in place. Allow the glue to dry completely before displaying your designs.

Peel and Press

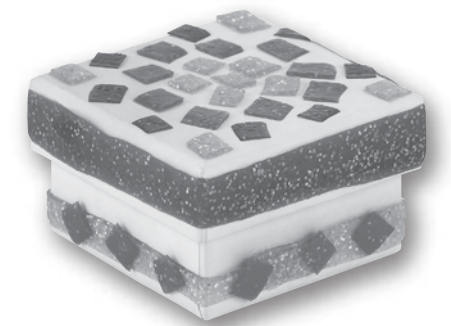

- Gently peel the design away from the plastic project sheet. If it sticks, or is difficult to remove, it needs more drying time.
- Press your designs against a clean window. They cling like magic! You can display these on mirrors too.

Depending on the amount of light and temperature, the color and consistency of your window art may change over time. Save any leftover paint to create new art.

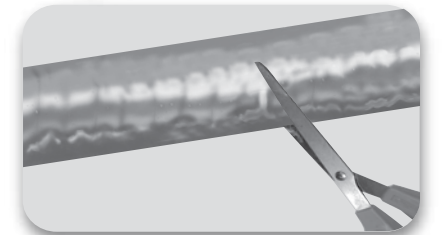

Decorating Your Trinket Box

You can paint directly on your trinket box or use small pieces of dried 3D Wonder Paint to create a unique mosaic effect. If using more than one color, the paint will blend together creating interesting color combinations.

Mosaic Look

Working on the plastic project sheet, squeeze out strips of 3D Wonder Paint. Set them aside to dry. When they are completely dry use your scissors to cut them into random mosaic shapes. Glue the pieces onto your trinket box. Finish off your design with glitter glue and rhinestones.

Stained Glass Look

- 1) Using the outline paint, create shapes on your trinket box. Let dry for about 30 minutes.
- 2) Fill in the outlines with 3D Wonder Paint to create a stained glass look.
- 3) You can also create the shapes on your clear sheet. Peel them off when completely dry and then glue them onto the trinket box.

Sun Catcher

Your kit includes four plastic shapes - oval, heart, circle and flower. Use these shapes to create ornaments, window decorations or even a frame. Look on the box for samples and ideas. Remove the plastic protector from sun catcher before you begin to paint. You can hang them using ribbon or elastic cord.

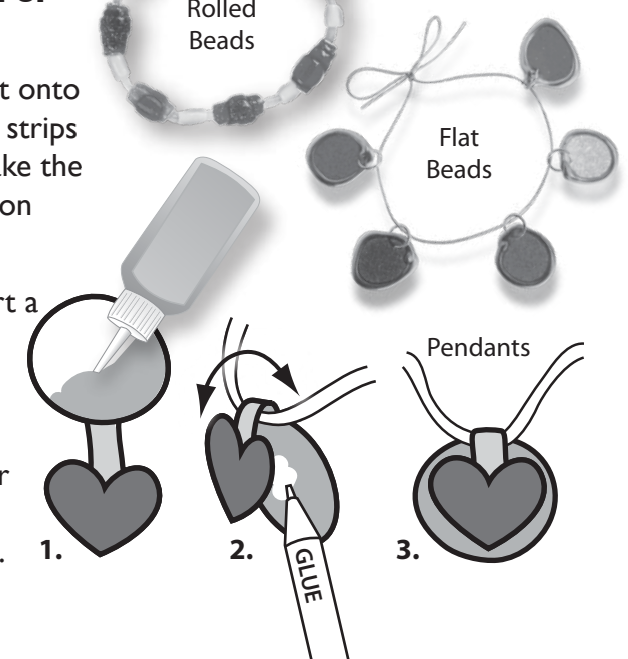

Jewelry

Caution - if your jewelry is exposed to water or moisture, the colors may bleed onto your skin or clothing.

Rolled Beads - Squeeze out strips of 3D Wonder Paint onto the plastic project sheet. Let dry overnight. Roll the dried strips around a pencil to make a bead – use your scissors to make the strips smaller as needed. String these beads onto the ribbon included to make a necklace or bracelet.

Flat Beads - Outline small shapes and fill them in. Insert a jump ring while the shape is drying. String these on the elastic cord included to make a charm bracelet.

Pendants - Use the black or silver outline to make a pendant shape. Once it has dried, fill it in with 3D Wonder Paint. Set it aside to dry overnight. Fold the top of the pendant over the ribbon or cord and then glue it in place.

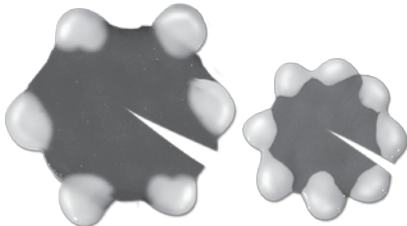

Layered Flowers

1.) Using the flower pattern sheets, trace two different size flowers. It's a good idea to use more paint so the petals will be thicker. You can either use outline paint or not. If you do use it, remember to wait for it to dry before you fill it in.

2.) Create a petal effect by adding dots at the edges of the flower shapes as shown. Try using a different colors. As the paint settles, the colors will fade together creating a cool blended effect.

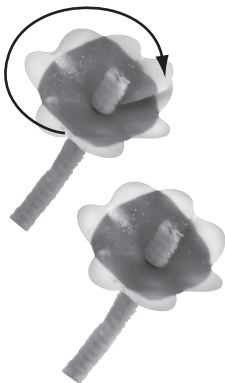

3.) When the paint is completely dry, use your scissors to create a slit in your flowers as shown.

6.) Bend the tip of the chenille stem down and then glue a rhinestone in the center.

4.) Starting with the smallest flower, wrap the flower around the end of the chenille, overlapping two petals. Gently pull or stretch the flower to give it dimension. Push the base of the flower firmly against the chenille to be sure it sticks.

5.) Continue building your flower with the remaining shape. Then add a drop of glue to the base of the flower to secure the petals.

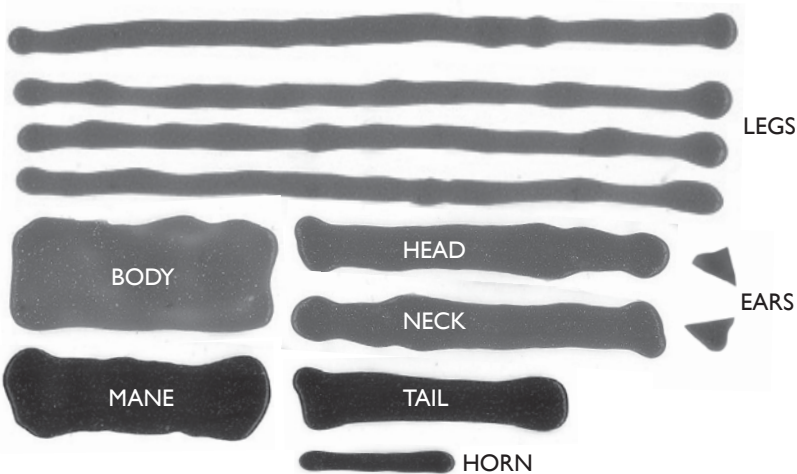

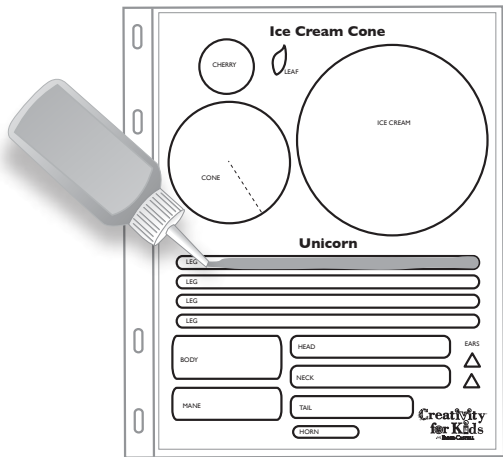

7.) Create leaves for your flowers using the green paint. When the leaves are dry, wrap them around the chenille stem and press them firmly into place.

TIP: If you want to display your flowers in a vase, wrap the chenille stems around the green sticks included.

Unicorn

1.) Paint the unicorn pieces as shown on the unicorn pattern sheet. Use as many or as few colors as you want. We chose to use 2 colors for the following unicorn sample - one for the body and another for the mane and tail. Let the paint dry over night.

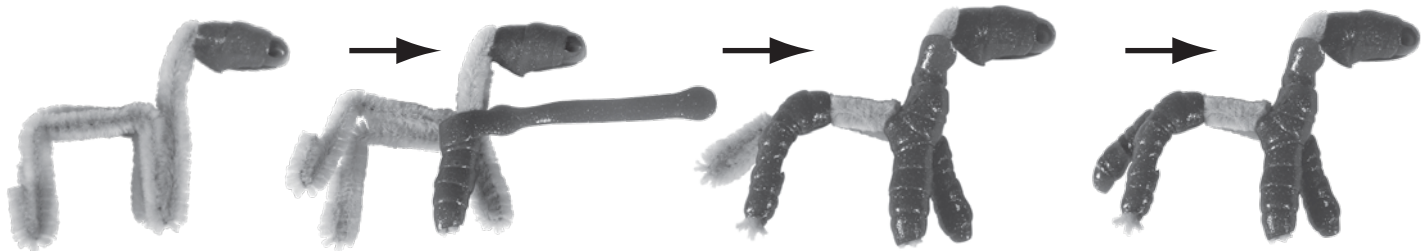

2.) Now you're ready to prepare the unicorn base. First bend a chenille stem in half.

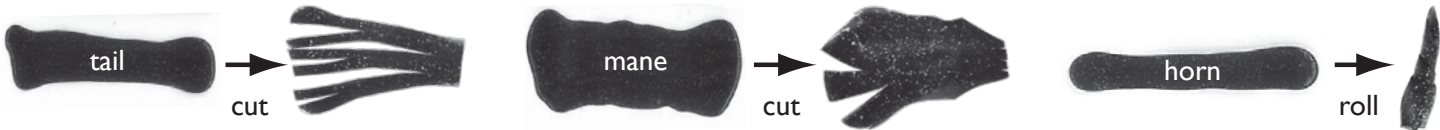

3.) Continue bending the stem to create the base of the unicorn as shown.

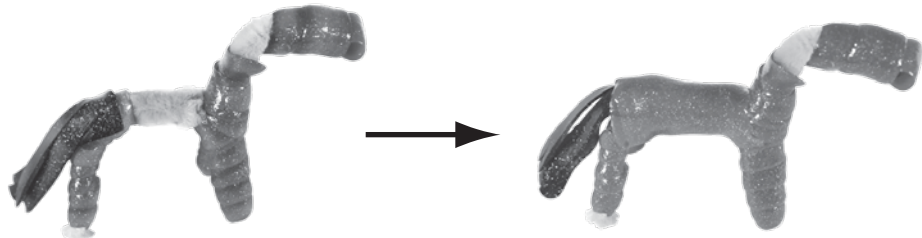

4.) Now you're ready to start wrapping the unicorn using your paint parts. Begin with the head and then move on to the legs. The 3D paint will stick to itself, so don't worry about having to use glue.

5.) Cut the tail and mane so it looks like the unicorn has loose hair. Roll the horn piece into a cone shape to create the unicorn horn.

6.) Attach the tail as shown. Then wrap the body piece overlapping the tail.

7.) Place the mane over the head then attach the ears, horn and wiggly eyes. Your unicorn is complete!

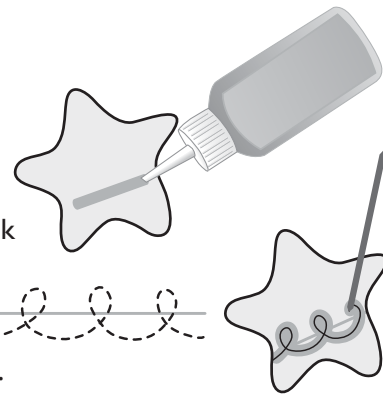

Marbleizing Techniques

The marbleizing technique is a great way to add interest and texture to your designs. Simply lay down the colors and then create designs using a toothpick or paper clip as shown.

Squiggly

Add a line of paint over a color.

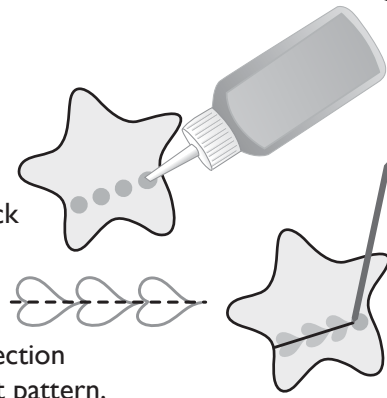

Drag a toothpick or paper clip through line of paint in a squiggly motion.

Heart

Add drops of paint over a color.

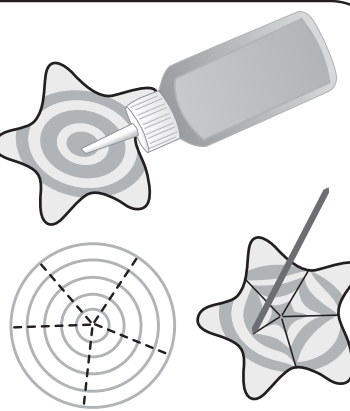

Drag a toothpick or paper clip through the middle of the dots in one direction to make a heart pattern.

Star burst

Add a series of alternate color paint circles.

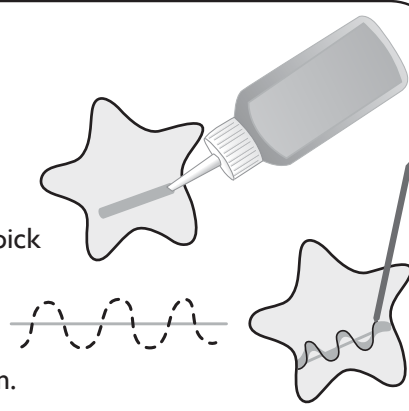

Drag a toothpick or paper clip from the inside out in a straight line and repeat as many times as you like.

Zig zag

Add a line of paint over a color.

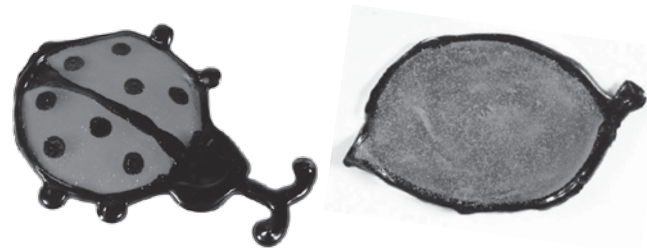

Drag a toothpick or paper clip through line of paint in a zig zag pattern.

3D Ladybug

1.) Trace the 3D ladybug and leaf pattern with the black outline paint. Don't forget to fill in the black dots. Add any other details you like.

2.) Once the outline paint is completely dry, fill in the lady bug and leaf with the 3D Wonder Paint.

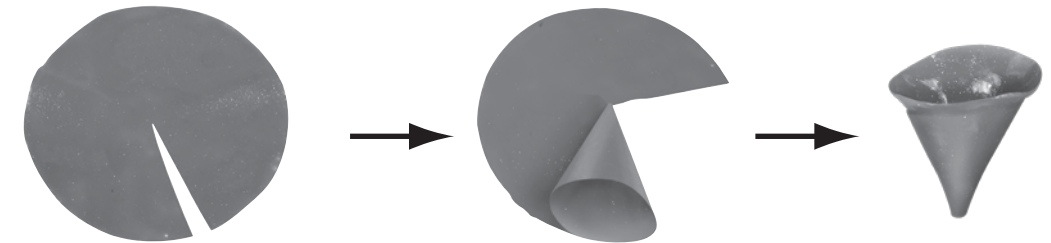

3.) When the paint is completely dry, stuff a wadded piece of tissue or paper towel under the body of the ladybug. Remove any extra as needed - no paper should be sticking out. Press the outer edge of the ladybug body onto the leaf. Use glue if you wish. -Voila!

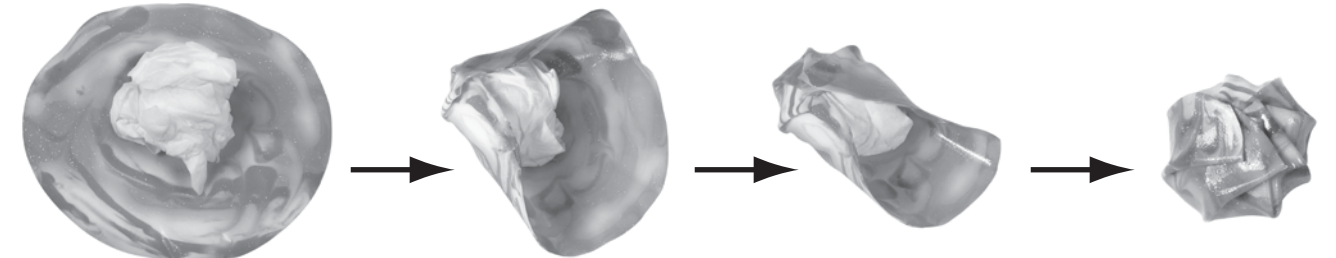

Ice Cream Cone

1.) Fill in the ice cream cone pieces on the pattern sheet. You do not need to outline them. If you like, make your ice cream multicolored by adding more paint colors. Swirl them together with a toothpick for a fun marble effect.

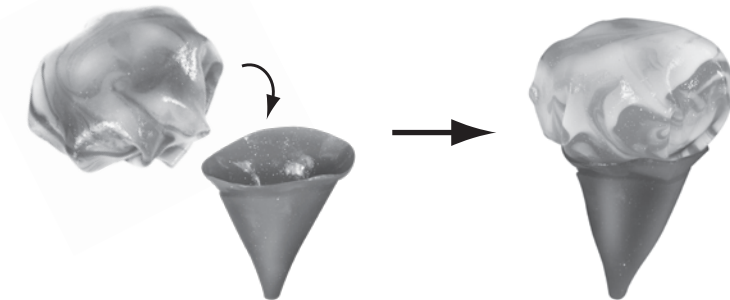

2.) Once the pieces are completely dry, use scissors to cut a slit into the cone piece as shown. Wrap it around itself to create a cone shape.

3.) Take a wadded piece of tissue or paper towel and form it into a ball. Wrap the paper with the ice cream piece creating a ball as shown. Press the overlap of the ice cream piece onto itself so it stays closed.

4.) Place the ice cream onto the cone while stuffing the overlapped part inside so that it will not show. Though you do not need it, you may want to use glue to hold it together.

5.) Stuff the cherry the same way you did the ice cream, only with a much smaller piece of paper. Place the little leaf on the ice cream cone then the cherry on top. Fold the leaf up and press it against the cherry to give it depth. Yum! Your ice cream cone is finished.
