

Wooden Tub Care & Maintenance Tips

No installation instructions required! This tub couldn't be easier to install. Just place it at its desired spot and then connect the drain. If your model includes the tub filler you will also need to connect it to the waterline.

Keeping it Clean: This tub does not require any special cleaning products and you should never apply harsh chemicals to the wood. To clean, simply use a fresh towel with hot water and mild soap. Keep the tub clean after every use to ensure a long lasting finish.

Making it Last: These tubs are designed to be used on a regular basis. If the tub is not used on a weekly basis, it is recommended that you rinse it down every couple of weeks to ensure it maintains proper moisture levels especially if used in a dry climate. This will prevent cracking or splitting of the wood caused by drying out. If you plan not to use the tub for over a month, it is recommended that you leave a medium size sponge in a ziplock filled with water to keep it moist, like the one that comes with the tub, and cover it with the plastic bag included. To prevent mold build up we do not recommend keeping water in your tub for over a week.

Troubleshooting: If your tub leaks at first use or after a while of non operation, not to worry. This is caused by the wood drying up and shrinking. To fix simply tighten the outer straps using an allen key then plug the drain and fill the tub with approximately 6" of water and let it soak overnight, this will cause the wood to swell back to its designed size and heal itself.

For indoor use only. Keep out of direct sunlight and safely away from any fireplaces.

Your tub comes with 1 year warranty against manufacturing defects.
