

RMCARD400 v1.0.7 Release Notes

REMOTE MANAGEMENT CARD FIRMWARE RELEASE NOTES

Applicable Products: RMCARD400

Version 1.0.7 (Release Date: October 17, 2025)

New Features

- Adds support for Multicast Domain Name System (mDNS)
- Adds support for Modbus TCP function via Web Interface
- Now includes support for three phase UPS

Feature Improvements

- The viewer account is disabled by default now
- Now supports firmware update via PowerPanel Business Management
- The range of timeout minutes in [System->Security->Session Control] is expanded to up to 20 minutes
- The sign-in performances when LDAP Server Type is set to Active Directory have been improved
- The maximum input length of [System->Identification->Location] has been expanded to 128 characters
- Function has been added to reject unsupported certificate formats during certificate uploads

Fixes

- Resolves an issue where the Manual IPv6 address remained active after being disabled
- Fixes an issue where the Hostkey Status is incorrectly displayed on the [System->Console Service] webpage
- Corrects an error where the PowerPanel Business (PPB) type is displayed incorrectly on the [UPS->PowerPanel List] webpage when connected to PowerPanel Business (PPB) Management
- Resolves an issue with accessory information not being displayed on PowerPanel Business when the accessory sensor is connected to the RMCARD
- Fixes an issue where the temperature and humidity in PowerPanel Business Remote are being displayed incorrectly when the RMCARD is not connected to an environmental sensor
- Corrects an issue where the Web Interface will intermittently display a "500 Internal Server Error" after login
- Resolves a problem where the test email shows status "OK" on the [System->Notification->Email Recipients] webpage, but the email isn't delivered
