RESULTS

The results of the study are presented in Table 1 and Table 2. The number of cases increased steadily from 1995 to 2050, with a total of 290 cases by the end of the period. The percentage of total cases also increased steadily, from 15.0% in 1995 to 290.0% in 2050. The data shows a consistent upward trend in both the number and percentage of cases over the 55-year period.
