

# ENCLOSURES

1. The first enclosure is a simple rectangular box with a lid. It is made of cardboard and is suitable for small insects. The lid is attached with a rubber band. The box is painted white and has a small window on the side for observation.

2. The second enclosure is a more complex structure. It consists of a main body and a separate lid. The main body is made of cardboard and has a small window on the side. The lid is made of a different material, possibly plastic, and is attached with a rubber band. The enclosure is painted white and has a small window on the side for observation.

3. The third enclosure is a simple rectangular box with a lid. It is made of cardboard and is suitable for small insects. The lid is attached with a rubber band. The box is painted white and has a small window on the side for observation.
