

QUESTION 1578

Which of the following is NOT a characteristic of a primary cell?

A. They are used in applications where long life is required.

B. They are used in applications where high power is required.

C. They are used in applications where low power is required.

D. They are used in applications where high energy density is required.

ANSWER: A

QUESTION EXPLANATION:

Primary cells are used in applications where high power is required.

Secondary cells are used in applications where long life is required.

Primary cells are used in applications where low power is required.

Secondary cells are used in applications where high energy density is required.
