

# POWERPANEL® CLOUD PRO SOFTWARE

Power monitoring application which keeps users aware of UPS operation at multiple locations from anywhere

PowerPanel® Cloud Pro makes it easy to monitor an unlimited number of CyberPower UPS systems anywhere there is an internet connection. Now businesses are able to simplify power monitoring options to gain efficiency and reduce IT resources.

The dashboard provides at-a-glance UPS status, power conditions, and instant problem recognition. Cloud card installation enables simple remote monitoring from anywhere. Event logs provide key insights for troubleshooting and prevention of potential power issues. Alert notifications are sent via email.

It's ideal for decentralized service providers, POS systems with limited network infrastructure, and small/medium businesses looking to simplify power monitoring. Billing is made simple and flexible by allowing users to purchase exactly the number of nodes they need each month. Note: PowerPanel Cloud Pro has a minimum order of 20 nodes per month.

## FEATURES

- Decentralized Monitoring
- Easy to Setup & Connect
- Single Sign On (SSO)
- Intuitive Design
- Web Based Application
- Alert Notifications
- Decentralized Monitoring
- Advanced Hierarchy
- Admin/Viewer Permissions
- Monthly Billing

## TYPICAL APPLICATIONS

- Desktop Computers
- Server Rack Installations
- Storage Devices
- Business Workstations
