

Titan™ Tabs with EasyWipe™ System Mixing and Pre-wetting Instructions

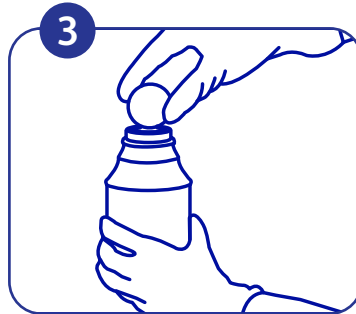

Mixing Disinfectant Solution

Wash hands and don gloves.

Dispense 1 quart of water into the quart bottle for mixing.

Add 1 tablet for 1 quart of water. Allow tablet to dissolve.

Replace cap.

When saving solution for later use, mark shelf life on the label for 3 days in this format.

Pre-wetting EasyWipes

Add 16 fl. oz. (1/2 of the quart bottle) of solution to empty EasyWipe container.

Place a new roll of EasyWipe wipes into the container. Allow wipes to absorb solution for 1 minute.

Add remaining solution to EasyWipe container. Mix and pour an additional 48 fl.oz. of solution into EasyWipe container.

Pull wipe from the center of the roll up about 5 to 6 inches and push through the center opening of the snap-on lid. Snap the lid closed on the EasyWipe container and begin using the wipes. Close the center-opening cover after each use to prevent loss of solution. Shelf life is 1 day after wetting.
