

Table 1 Summary of the main findings of the study		
Study design	Retrospective cohort study	1995-2000
Study population	10,000 men aged 40-70 years	1995-2000
Exposure	Use of oral contraceptives	1995-2000
Outcome	Myocardial infarction	1995-2000
Results	OR 1.25 (95% CI 1.05-1.48)	1995-2000
Conclusion	Use of oral contraceptives is associated with an increased risk of myocardial infarction	1995-2000
Strengths	Large sample size, prospective design	1995-2000
Limitations	Retrospective design, potential for bias	1995-2000
