

Brass 45° Flare Fittings

Product Applications

- For use with copper, brass, aluminum and welded steel tubing that can be flared.
- Used extensively for connections of fuel, oil, air, liquid petroleum (LP), and natural gas lines.

Product Advantages

- BrassCraft flare fittings resist mechanical pull out.
- Recommended for higher pressures than those covered by compression fittings.
- Designed to be assembled and disassembled over and over again.
- Reusable with long or short nuts.
- Manufactured from brass.
- Backed by BrassCraft's more than 75 year history and reputation for quality and service.

Special Orders

- Special fitting configurations and sizes may be ordered. Please furnish a print or sketch of your needs with your inquiry.
- Fittings are available in bulk quantities on request. Contact your sales representative for details.

How To Order

- Order fittings by part number and product name.
- Flare bodies and nuts are separate items and are ordered individually. (Indicate both part numbers – body and nut – when ordering).
- To order flare fittings with nuts assembled, add suffix "WN".

Assembly Instructions

1. Cut tubing to required length, making sure that the ends are square and all burrs are removed.
2. Slide nut onto tubing. Threaded end of nut must face out.
3. Flare tubing end with a 45° flaring tool.
 - A. Measure flare diameter.
 - B. Check flare for excessive thin out.
4. Lubricate threads with a drop of oil and assemble nut onto body, hand tighten.
5. Tighten with wrench until assembly feels "solid". Then apply a one-sixth turn.

CAUTION: Do not over torque. May damage the fitting and split the tubing at the flare.

HINT!

Single or Double Flares?

Tubing may be either single or double flared for maximum reliability. When working with steel tubing, such as Bundy, double flaring is recommended to protect against tube cracking or splitting. Single flares are commonly used to connect copper and aluminum tubing.

Double Flare Eliminates the Danger of Over Tightening

The advantage of a double flare is that an effective seal can be made with specified wrench torques, and yet maximum wrench torques for single flares can be exceeded by a considerable margin without "ironing out" or "washing out" the flare. The double flare compensates for this over-torquing while maintaining a reliable seal. The double flare is also desirable for tubing joints which must be taken apart and reassembled frequently, especially on 3/8" OD tube size or smaller.

PART NO.	USE	UPC	DESCRIPTION	FINISH	QTY	LBS
Flare Plugs						
39-6	○	026613005690	3/8" OD Tube	Rough	10	0.5
39-8	○	026613005706	1/2" OD Tube	Rough	10	0.8
