

1. *Micrococcus*  
*luteus*

*Micrococcus luteus*

*Micrococcus luteus* is a Gram-positive, spherical bacterium. It is commonly found in soil, water, and on the skin of humans and animals. The bacteria are arranged in tetrads or cubical packets of eight. They are non-motile and do not form spores. *M. luteus* is a facultative anaerobe and can grow in the presence or absence of oxygen. It is a common contaminant in food and clinical specimens.
