Laser Dart Line Mounting Instructions #37-0108

AVOID EXPOSURE LASER RADIATION IS EMITTED FROM THE APERTURE

AVOID DIRECT EYE EXPOSURE

Max Output <5mW, Wavelength 650nm-660mm, Class II Laser Product Complies with FDA Radiation Performance Standards 21 CFR Chapter 1, Subchapter J GLD Products, Muskego, WI 53150, Model #37-0108

ACCESSION NO:1410047-000

DANGER

When the laser beam dims, or stops operating, replace batteries Dispose of batteries promptly and properly, Do not burn them Use only fresh batteries of the required size and type Do not mix old and new batteries, or different types If you do not plan to use the Laser Dart Line for a month or more remove batteries, batteries can leak chemicals that can damage electronic parts

WARNING! Never look directly into the laser WARNING! Keep away from children WARNING! Never point the device towards anyone's eyes WARNING! Laser light can also be dangerous when reflected on a mirror-like surface WARNING! Use of controls or adjustments, or the performance of procedures other than specified herein, can result in hazardous radiation exposure

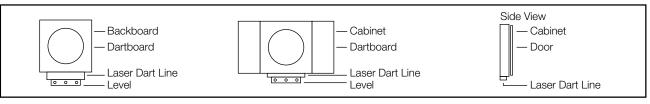

Read all instructions carefully before mounting the Laser Dart Line.

The Laser Dart Line can be mounted directly to a wall or the underside of a dartboard cabinet.

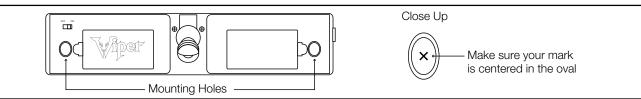

Required tools: pencil, screws, screwdriver, tape measure, drill, drill bit, and level.

Instructions

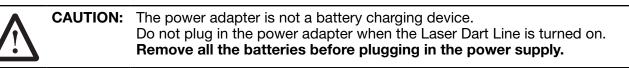

1) Mount your dartboard or dart cabinet. With one hand, place the Laser Dart Line on the wall or cabinet directly below and centered to the dartboard. With your other hand, level the Laser Dart Line.

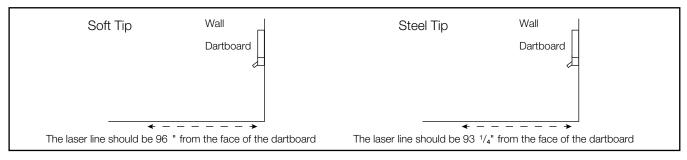

2) Locate the two mounting holes on the front of the Laser Dart Line. Use a pencil, marker, or nail to mark the center of the holes on the wall or cabinet.

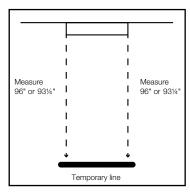

- 3) Drill a pilot hole on each mark that you created in step two. If using plastic anchors for dry wall, plaster, or cement, drill the holes so that the anchors fit snugly. Insert the plastic anchor. If drilling into a wood cabinet or wood stud, only pilot holes will be necessary.
- 4) Align the Laser Dart Line with the anchors or pilot holes and screw the Laser Dart Line into place. The screws will expand the plastic anchors. Before tightening the screws, check that the Laser Dart Line is level.
- 5) Remove the front battery cover and insert 4 AA batteries. The Laser Dart Line can also be powered by an AC to 5v 1000 mA adapter with DC plug polarity configured as positive (+) outside and negative (-) inside. (4 AA Batteries and adapter not included). Adapter item #42-9987 is available from GLD Products.

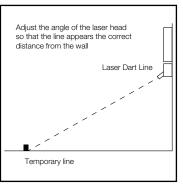

6) Measure the distance for your throw line

Use a common household item, such as a broom handle or ruler, to make a temporary line at the correct distance. Measure from each side of the dartboard to the temporary line.

7) Once your laser throw line is set, tighten the 2 screws next to ball to secure the Laser Line in place.

8) WARNING: AVOID DIRECT EYE EXPOSURE

Turn the Laser Dart Line on and position the laser head until it is flush with your temporary line.

9) If your surface area is uneven, loosen either the left or right screw and place shims behind the housing of the Laser Dart Line until the Laser Dart Line is in the correct position.

Please call or consult the GLD website, gldproducts.com, to order the 5V 1000ma Positive Outer Power Adapter, #42-9987.

WARRANTY: Great Lakes Dart Mfg, Inc. warrants this product to be free of defects in material and workmanship for a period of 90 days by the original purchaser of the unit.
