

The diagram illustrates the structure of a plant cell. The cell wall is the outermost layer, providing structural support. The cell membrane is located just inside the cell wall. The large central vacuole is a prominent feature, occupying most of the cell's interior. The nucleus is the control center of the cell, and the cytoplasm is the fluid-filled space where organelles are suspended. Chloroplasts are responsible for photosynthesis.

FALCETILE

The diagram illustrates the structure of a falsette cell. The cell wall is the outermost layer, providing structural support. The cell membrane is located just inside the cell wall. The large central vacuole is a prominent feature, occupying most of the cell's interior. The nucleus is the control center of the cell, and the cytoplasm is the fluid-filled space where organelles are suspended. Chloroplasts are responsible for photosynthesis.
