

## KNOW YOUR BASS

### THE BASS

#### Species

The bass is a member of the family *Siluridae*, which includes the carp, goldfish, and koi. It is a freshwater fish that is native to the eastern United States and is found in a wide variety of habitats, including rivers, streams, and lakes.

#### Appearance

The bass is a slender, elongated fish with a pointed snout and a dorsal fin on its back. It has a mottled pattern of dark spots on its body, which helps it blend into its environment. The bass is typically found in shallow water and is known for its ability to jump out of the water.
