

1992-1993

- 1. The 1992-1993 drought was the most severe in Great Britain since 1947.
- 2. The drought was caused by a combination of factors, including a severe winter, a dry spring, and a hot, dry summer.
- 3. The drought had a significant impact on the environment, including the death of many trees and the drying up of many rivers and streams.
- 4. The drought also had a significant impact on the economy, including a decrease in agricultural production and a decrease in tourism.
- 5. The drought was a major disaster for Great Britain, and it is important to learn from it to prevent such a disaster from happening again.
