

The diagram illustrates a four-step process:

- Step 1: Initial Assessment** - This step involves identifying the problem and gathering initial information.
- Step 2: Data Collection** - This step involves gathering relevant data and information to support the analysis.
- Step 3: Analysis and Interpretation** - This step involves analyzing the collected data to identify patterns and draw conclusions.
- Step 4: Reporting and Recommendations** - This step involves presenting the findings and providing recommendations based on the analysis.

A feedback loop arrow connects Step 4 back to Step 1, indicating that the process is iterative and allows for adjustments based on the results of the reporting phase.
