

THE BATTERY

1. The battery is a source of electrical energy.

2. It is made up of several cells.

3. Each cell contains a different chemical.

4. The chemicals react to produce electricity.

5. The battery is used to power many devices.

6. It is a common source of power for portable electronics.

7. The battery is a key component of many systems.

8. It is used to store energy for later use.

9. The battery is a vital part of many modern technologies.

10. It is a key element in many industrial and consumer products.

11. The battery is a critical component of many systems.

12. It is used to power many devices.

13. The battery is a key component of many systems.

14. It is used to power many devices.

15. The battery is a key component of many systems.

16. It is used to power many devices.

17. The battery is a key component of many systems.

18. It is used to power many devices.

19. The battery is a key component of many systems.

20. It is used to power many devices.

21. The battery is a key component of many systems.

22. It is used to power many devices.

23. The battery is a key component of many systems.

24. It is used to power many devices.

25. The battery is a key component of many systems.

26. It is used to power many devices.

27. The battery is a key component of many systems.
