

**PROCESSES**

The following processes are used in the production of the product:

- 1. Material selection and procurement
- 2. Design and development
- 3. Manufacturing and assembly
- 4. Quality control and inspection
- 5. Packaging and distribution

Process	Description	Responsible
1. Material selection and procurement	Selection of raw materials and components from suppliers.	Procurement Dept.
2. Design and development	Creation of technical drawings and specifications.	Engineering Dept.
3. Manufacturing and assembly	Production of the product using various manufacturing techniques.	Manufacturing Dept.
4. Quality control and inspection	Testing and inspection of the product to ensure it meets quality standards.	Quality Control Dept.
5. Packaging and distribution	Final packaging and shipping of the product to customers.	Logistics Dept.

**CONCLUSION**

The production process is highly efficient and ensures the highest quality of the product. The use of modern manufacturing techniques and strict quality control measures are key to our success.
