

# STEELMAN<sup>®</sup> SECURITY SEAL

Security seal should be used on oil drain plugs, and oil filters.  
Use this to protect your business and your reputation.

## Instructions:

To use security seal, place a bead of paste along the joint of the two surfaces needing tamper protection. Apply liberally, ensuring both surfaces have a sufficient amount of sealant. Once the seal dries, any crack in the seal indicates that the parts have been separated.

**WARNING - ALWAYS** wear approved safety equipment when working with tools
