

ANSWER KEY

WRIST

HAND

1. The hand is the part of the body that is used to hold and manipulate objects. It is made up of the fingers, thumb, and wrist. The hand is one of the most important parts of the body for many activities, such as writing, drawing, and playing instruments.

2. The wrist is the part of the hand that connects it to the forearm. It is made up of several small bones and ligaments. The wrist is important for many activities, such as holding a pen, typing, and playing sports. It is also the part of the hand that is most vulnerable to injury.

Part	Function
Thumb	Used for gripping and holding objects.
Index Finger	Used for pointing and fine motor tasks.
Middle Finger	Used for gripping and holding objects.
Ring Finger	Used for gripping and holding objects.
Little Finger	Used for gripping and holding objects.
Wrist	Connects the hand to the forearm and provides stability.
