

This diagram illustrates a vertebral body fracture. The fracture line is shown as a horizontal line across the middle of the vertebral body, positioned above the spinal canal. This type of fracture is typically caused by a compression force, such as a fall or a heavy lift, and is often associated with osteoporosis or trauma.

Figure 1: Diagram of a vertebral body fracture.

## FALCETUDE

This diagram illustrates a vertebral fracture with a wedge-shaped deformity. The fracture line is shown as a horizontal line across the middle of the vertebral body, positioned below the spinal canal. This type of fracture is typically caused by a compression force, such as a fall or a heavy lift, and is often associated with osteoporosis or trauma.
