

EXPLANATION

The first step is to identify the main components of the system. This involves understanding the inputs, outputs, and internal processes. Next, we analyze the flow of information and materials between these components. This is often done using a process flow diagram or a similar tool. The goal is to understand how the system works and where any inefficiencies or bottlenecks might be occurring. Once this is done, we can then look for ways to improve the system, such as by streamlining processes or adding new resources.

CONCLUSION

In conclusion, the system is designed to provide a comprehensive overview of the project's progress. It includes a detailed schedule, a list of tasks, and a clear communication channel. The system is user-friendly and easy to navigate, ensuring that all team members have access to the information they need. We believe this system will be a valuable tool for the project and look forward to its successful implementation.

KINGSTON

Item	Qty	Part No.	Description
1	1	101	Shaft
2	2	102	Gears
3	1	103	Bearing
4	1	104	Housing
5	1	105	Seal

Notes: 1. All dimensions are in millimeters. 2. Material: Steel. 3. Surface finish: Ra 0.8. 4. Heat treatment: Tempered. 5. Assembly: Torque to 10 Nm.
