

APNEUSTIC BRASS

Pressure: 100 psi
Flow: 100 lpm (average flow)

Inspection

1. Check for leaks before use or storage (A)
2. Check for flow in the correct direction (B)
3. Check for correct pressure (C)
4. Check correct pressure in the correct direction (D)
5. Check for correct flow (E)
6. Check for correct pressure (F)
7. Check for correct pressure (G)

Instructions

1. The Apneustic Brass is used to provide a constant flow of air to the patient's lungs during inspiration. It is used in conjunction with a pressure gauge and a flow meter to monitor the patient's respiratory status.
