

THE BATTERY

1. The battery is the source of electrical energy for the system.

2. It provides the initial surge of current to start the engine.

3. It maintains the system voltage during normal operation.

4. It recharges the system during engine operation.

5. It provides a reserve of energy for emergency use.

6. It is a critical component of the electrical system.

7. It must be maintained in good condition.

8. It should be replaced when it is worn or damaged.

9. It should be tested regularly to ensure proper operation.

10. It should be stored in a cool, dry place.

11. It should be handled with care to avoid damage.

12. It should be disposed of properly when it is no longer usable.

13. It should be replaced with a battery of the same type and capacity.

14. It should be replaced with a battery of the same voltage.

15. It should be replaced with a battery of the same size and weight.

16. It should be replaced with a battery of the same brand.

17. It should be replaced with a battery of the same model.

18. It should be replaced with a battery of the same age.

19. It should be replaced with a battery of the same manufacturer.

20. It should be replaced with a battery of the same type and capacity.

21. It should be replaced with a battery of the same voltage.

22. It should be replaced with a battery of the same size and weight.

23. It should be replaced with a battery of the same brand.

24. It should be replaced with a battery of the same model.

25. It should be replaced with a battery of the same age.

26. It should be replaced with a battery of the same manufacturer.

27. It should be replaced with a battery of the same type and capacity.

28. It should be replaced with a battery of the same voltage.

29. It should be replaced with a battery of the same size and weight.

30. It should be replaced with a battery of the same brand.

31. It should be replaced with a battery of the same model.

32. It should be replaced with a battery of the same age.

33. It should be replaced with a battery of the same manufacturer.

IGNITION

Component	Function
Battery	Provides electrical energy to the system.
Coil	Increases the voltage of the electrical energy.
Distributor	Distributes the high voltage to the spark plugs.
Spark Plugs	Ignites the fuel-air mixture in the combustion chamber.

The ignition system is responsible for providing the spark that ignites the fuel-air mixture in the combustion chamber. It consists of several components, including the battery, coil, distributor, and spark plugs. The battery provides the electrical energy to the system, which is then increased in voltage by the coil. The distributor then distributes this high voltage to the spark plugs, which ignite the fuel-air mixture.

The ignition system is a critical component of the engine, and it must be maintained in good condition to ensure proper operation. It should be tested regularly to ensure that it is providing the correct spark to the combustion chamber.
