

QUESTION 123 (1 of 7)

Which of the following is a characteristic of a primary cell?

1. They are used in applications where long life is required.

2. They are used in applications where high current is required.

3. They are used in applications where high voltage is required.

4. They are used in applications where low current is required.

5. They are used in applications where low voltage is required.

6. They are used in applications where high power is required.

7. They are used in applications where low power is required.

8. They are used in applications where high energy is required.

9. They are used in applications where low energy is required.

10. They are used in applications where high efficiency is required.

11. They are used in applications where low efficiency is required.

12. They are used in applications where high efficiency and low current are required.

13. They are used in applications where low efficiency and high current are required.

14. They are used in applications where high efficiency and high current are required.

15. They are used in applications where low efficiency and low current are required.

16. They are used in applications where high efficiency and low voltage are required.

17. They are used in applications where low efficiency and high voltage are required.

18. They are used in applications where high efficiency and high voltage are required.

19. They are used in applications where low efficiency and low voltage are required.

20. They are used in applications where high efficiency and low power are required.

21. They are used in applications where low efficiency and high power are required.

22. They are used in applications where high efficiency and high power are required.
