

Care & Maintenance

This furniture is designed for indoor use.

Damage to metal furniture can come from temperature changes in relative humidity (RH) in our homes. Humid air oxidizes metal which results in rusting, corrosion, tarnishing and roughness on the metal surface.

To protect against the humidity effect, your furniture is plated. The plated layer protects the metal from oxidizing, corrosion, tarnishing and scratching and keeps it looking good for years to come.

To help protect your metal furniture, follow these steps:

- Wipe down the surface with a damp, soft cloth
- Wipe up spills promptly
- Clean with a dry cloth
- Do not use abrasive cleaners, chemical solvents, strong detergents, cleaners with bleach, and furniture polish
- Use soft felt base coasters, placemats to help prevent scratches
- Keep furniture out of direct sunlight, which can cause cracking or roughness on the protective layer
- If it can be avoided, do not place furniture near heating vents
- Keep the furniture 3 to 4 inches away from the wall, giving heat and air space to circulate
