

THE BATTERY

1. The battery is a source of electrical energy.

2. It consists of several cells connected in series.

3. Each cell contains a different metal electrode.

4. The electrodes are immersed in an electrolyte.

5. The electrolyte allows ions to flow between the electrodes.

6. This flow of ions creates an electrical current.

7. The current can be used to power a device.

8. The battery will stop working when the electrodes are used up.

9. The battery is a source of electrical energy.

10. It consists of several cells connected in series.

11. Each cell contains a different metal electrode.

12. The electrodes are immersed in an electrolyte.

13. The electrolyte allows ions to flow between the electrodes.

14. This flow of ions creates an electrical current.

15. The current can be used to power a device.

16. The battery will stop working when the electrodes are used up.

17. The battery is a source of electrical energy.

18. It consists of several cells connected in series.

19. Each cell contains a different metal electrode.

20. The electrodes are immersed in an electrolyte.

21. The electrolyte allows ions to flow between the electrodes.

22. This flow of ions creates an electrical current.

23. The current can be used to power a device.

24. The battery will stop working when the electrodes are used up.
