

BUSINESS MANAGER

OVERVIEW

Apple Business Manager (ABM) is a simple tool designed to make deploying Apple products efficient and straightforward. Apple Business Manager allows a dealer to purchase and preconfigure iPads before even arriving at the job site. When paired with a Mobile Device Management (MDM) software ABM and an MDM work in tandem to register, set up, and manage every iPad deployed internally in your organization or a customer's home.

BENEFITS

- Zero configuration of the iPad directly out of the box. This allows Technicians to focus on getting a customer's house setup and not taking time to configure every iPad on the job.
- Provision device groups per deployment. This allows for each deployment of iPads to receive unique settings and configurations per iPad's intended purpose.Â
- Auto-enroll iPads into an MDM environment for more precise control and settings of iPad when managed.
- Connects all purchases through SMB Business and Apple Enterprise Sales Team.
