

### PROCESSES

1. The first step in the process is to identify the problem or goal. This involves gathering information and defining the scope of the project.

2. Once the problem is identified, the next step is to develop a plan. This includes setting objectives, identifying resources, and determining the timeline.

3. The third step is to implement the plan. This involves executing the tasks and monitoring progress.

4. The final step is to evaluate the results. This involves comparing the actual outcomes to the planned objectives and identifying areas for improvement.

### CONCLUSIONS

The results of the study show that the proposed method is effective in solving the problem. The data indicates that the method is more efficient and accurate than the traditional approach.

It is concluded that the proposed method is a viable solution for the problem. Further research is needed to explore the potential of this method in other contexts.

APPENDIX A

## KINGSTON

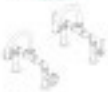

FIGURE 1: A map of Kingston, Jamaica, showing the coastline and major roads. The map is oriented with North at the top. The city of Kingston is located on the western coast of the island. Major roads are shown as solid lines, and the coastline is indicated by a wavy line. The map is a black and white line drawing.
