

Hardware Parts List:

- 2 - Handles
- 4 - Set Screws
- 4 - Pivot Hinge
- 2- Nylon Washers
- 4 - Strike Plate
- 4 - Foam Pad

CAUTION: Two people are required to assemble the glass door panels. Use care when handling. To avoid bodily injury or damage to the glass doors, do not assemble in high traffic areas.

1. Choose a location for the collector cabinet and refer to your cabinet set-up instructions for proper leveling procedures and safety strap assembly.
2. Locate and unpack the glass door panels.
3. Locate and unpack the door hardware.
4. Assemble one pivot hinge to the lower corner of the either door. Note:
 - Slide the lower pivot hinge over the clear urethane pads on the corners of the glass doors.
 - The side of hinge with visible screws should be on the **inside of the cabinet** after assembly is complete.
 - Snug hinge screws. Do not over tighten.
5. To attach the door to the cabinet, one person should place the lower pivot pin into the receiving hole of the cabinet. Use one large washer as illustrated.
6. The second person inserts the top pivot hinge into the upper receiving hole and holds in place while the first person pivots the door into the upper hinge and snugs the set screw. Do not over tighten.
7. Align and adjust the door so it can pivot without interference.
8. Repeat steps 4-7 to install the second glass door.
9. Assemble the handle on each glass door. Snug each screw. Do not over tighten.
10. Insert a foam pad in the metal strike plate and install onto the glass door. Align the four strike plates so they make contact with the magnet catch as illustrated.
