Closet Flanges

First in Innovation. First in Quality

Complete
A variety of sizes and models mean the right flange is available for any job

Innovative
Exclusive designs with unique features provide solutions for contractors

Trusted
Designed, engineered and molded in the USA using top-quality resins

Complete. Innovative. Trusted.

Knockout Flanges

The TKO™ uses an integrally molded test cap that prevents debris from entering the drain line during rough-in and allows for testing of the DWV system. The TKO's design was introduced over 25 years ago and has been improving ever since. Contractors have made it the industry's knockout closet flange of choice. They appreciate not only its quality but also the completeness of the line – six different connection types, in ABS or PVC, one- piece or with a stainless steel swivel ring.

Open Flanges

Open closet flanges are a cost-effective alternative in applications where a test cap is not needed. These include installations after the system is tested or where no testing is performed. Our complete line of open flanges includes five different connection types, in ABS or PVC, one-piece or with a corrosion-resistant, stainless steel swivel ring.

Offset Flanges

Offset flanges are designed to help contractors solve everyday problems like a mispositioned pipe or an inconveniently located floor joist. What makes the FullFlush™ and DropKick™ unique is their full-flow capacity – which will allow a 3" ball will pass through unobstructed. The FullFlush has a 3" Sch. 40 Hub connection, which will fit into 4" pipe. The DropKick's 3" spigot outlet easily connects to any fitting hub. Both are available in ABS or PVC and both are standard with a stainless steel swivel ring.

We're Making it in America
At Sioux Chief, we strive everyday to manufacture the best rough plumbing products on the market. We are proud to provide the best value for our distribution partners and installing contractors.

Push-In Flanges

Sioux Chief's PushTite™ uses a tough, engineered, elastomer gasket to seal against the inside wall of the drain pipe. The clean, simple installation makes it perfect for repair or remodeling jobs. The PushTite works well with most DWV pipe – ABS, PVC, cast iron, and even some copper and lead pipes. It has the largest flow diameter of any comparable flange on the market, and has smooth inner walls to reduce potential clogs. PushTites are available for both 3" and 4" drain pipe.

Specialty Flanges

Sioux Chief offers a wide range of closet flanges for specialty installations. From cast iron compression flanges for commercial settings, to brass rings for repair/remodel projects in homes with lead bends. We also offer urinal flanges for connecting wall-mounted urinals in commercial bathrooms.

Spacer & Repair Rings

Spacer and repair rings are used to repair or adapt closet flanges for specific applications, such as when new or thicker flooring is added. The QuickSpacer™ installs under the flange, while the Raise-A-Ring™ is typically set on top of the flange, and can be stacked if necessary. For repairs of cracked or broken flanges, installers can fit the stainless steel Ringer™ over the damaged flange for a fast, solid repair without removing the damaged flange.
